PRNewswire -- Maintaining its industry leading position in TV combination models, Toshiba America Consumer Products, L.L.C. ("Toshiba") announced today its new line of CRT TV combination models and the introduction of two new LCD TV/DVD combination models. The announcement includes the introduction of thirteen new CRT combination models with screen sizes ranging from 13" to 30" diagonally measured, including four new full HDTV models to meet the market's transition to high definition.

Widescreen CRT high definition TV/DVD models include the MD26H82 (26" diagonally measured) and MD30H82 (30" diagonally measured) and the high definition Tri-Play (TV/DVD/VHS) models include the MW26H82 (26" diagonally measured) and MW30H82 (30" diagonally measured).

"With the addition of HD tuners to both standard 4:3 and widescreen 16:9 CRT combination models, Toshiba continues to meet the market's digital transition by offering a wider range of HDTV options in the TV combination category," said Jodi Sally, Vice President of Marketing, Toshiba America Consumer Products Digital A/V Group.

The line-up also features seven models that are DivX Home Theater Certified. Via a PC, DivX provides consumers with a new multimedia experience by allowing users to play, create and share digital video by turning large videos into compact and convenient DivX files that can easily be burnt onto discs. Also new to the line is the addition of USB ports on select models to provide consumers with the most flexibility for accessing digital content. USB ports allow for the simple connection of multiple mass storage devices such as digital cameras, thumb drives and multi media card readers.

Tri-Play Combination

Toshiba's two new HDTV widescreen models are the MW26H82 (26" diagonally measured) and the MW30H82 (30" diagonally measured). Both of these 540p/1080i high definition models come equipped with VSB/QAM digital tuners and offer a High-Definition Multimedia Interface (HDMI(TM)) input to ensure that all signals remain in their pure digital form. Additionally, they allow for WMA, MP3, JPEG and DivX playback, feature a USB port, four picture preference modes and front A/V and headphone jacks.

Toshiba has also expanded its standard definition (SD) line of tri-play combination units to include the MW14F52 (14" diagonally measured), MW20F52 (20" diagonally measured) and **MW24F52** (24" diagonally measured). The MW14F52, MW20F52 and **MW24F52** are FST PURE(R) flat CRT TVs with full featured integrated DVD players and 4-head Hi-Fi VCRs. The MW20F52 and the **MW24F52** feature enhanced multimedia playback for WMA, MP3, JPEG and DivX content. For ultimate convenience, they feature a USB front interface, four picture preference modes and front A/V and headphone jacks.

The MW27H62 shares the preceding features but includes a VSB/QAM digital tuner. This model can receive HD signals but it will down-convert them and display them in 480i resolution. Known as "SD Bridge Recording," a down- converted signal allows users to record their favorite HD programs on a VCR tape in SD.

All of Toshiba's HD and SD Tri-Play units feature a digital audio output, allowing an easy connection to a Dolby(R) Digital or DTS(R) system for powerful home theater surround sound.

TV/DVD Combination

Toshiba's new expanded line-up of seven TV/DVD combination models includes two new high definition models, MD26H82 (26" diagonally measured) and MD30H82 (30" diagonally measured), and five new standard definition models MD13Q42 (13" diagonally measured), MD20Q42 (20" diagonally measured), MD14F52 (14" diagonally measured), MD20F52 (20" diagonally measured) and the MD24F52 (24" diagonally measured).

The two new widescreen FST PURE flat high definition models, MD26H82 and MD30H82, feature 540p/1080i

resolution display, include VSB/QAM digital tuners, a HDMI Input and a USB port. These sets also come equipped with a Digital Comb Filter and offer DivX, WMA, MP3 and JPEG Playback.

The MD14F52, MD20F52 and MD24F52 SD combos are FST PURE flat screen CRT TVs that provides greater edge detail and a wider viewing angle. The MD20F52 and the MD24F52 also offer StableSound(R), a Digital Comb Filter and WMA/MP3 playback.

All standard definition TV/DVD models offer a full featured integrated DVD player, front firing speakers, four picture preference modes, a front A/V and headphone jack and a JPEG viewer.

LCD TV/DVD Combination

Leading the market's transition to flat panel TV, Toshiba's combination line also includes an extensive line of LCDVD(TM) (LCD/DVD combination) models ranging from 15" to 37" diagonally measured. New for CES, Toshiba is introducing two new models -- the 15DLV76 (15" diagonally measured) and the 20HLV86 (20" diagonally measured).

The 15DLV76 combines a 4:3 TFT LCD display with 1024 x 768 pixel resolution with a full featured side-loading integrated DVD player. The unit also features a 3-line Digital Comb Filter, has a ColorStream Pro(R) Component video input and offers DivX, WMA, MP3 and JPEG playback.

Toshiba's 20HLV86 widescreen TFT LCD HD monitor features 1366 x 768 resolution combined with a full featured side-loading integrated DVD player. The unit also offers a ColorStream Pro Component Video input, an HDMI input, a PC input and offers DivX, WMA, MP3 and JPEG playback.
